

Weeds of National Significance

Chrysanthemoides monilifera ssp. *monilifera*

Boneseed

stop the weed before it seeds!

• Current
• Potential

Boneseed is an erect, perennial shrub that grows vigorously up to 3 metres high.

Why it's one of our worst weeds

- aggressively invades native bushland
- threatens native plants
- regenerates quickly and outcompetes native plants after fire

How you can help

- learn to recognise boneseed
- join a community group to help control it
- help raise awareness in your local community

For further information contact your local government or departmental weeds officer or visit www.weeds.org.au
